EDUCATION

Jose Rizal University
Bachelor of Science in Information Technology — Cum Laude

EXPERIENCE

SOFTWARE ENGINEER, SENIOR

Stratpoint Technologies | Aug 2026 – Present

- Develop and maintain Java-based microservices using Spring Boot to support enterprise banking integrations and data processing workflows.
- Work with Apache Kafka and Confluent Cloud to build and maintain event-driven systems, including message producers, consumers, and streaming pipelines.
- Contribute to the modernization of legacy data processing systems by migrating Apache Flink workflows and business logic into Java-based microservices.
- Develop data integration and processing workflows using MongoDB for reliable data persistence and retrieval.
- Implement data transformation, validation, and event publishing mechanisms to ensure reliable communication across downstream banking systems.
- Collaborate with cross-functional engineering teams on system integration, troubleshooting, testing, and deployment across enterprise environments.
- Leverage AI-assisted development tools to support code analysis, debugging, refactoring, and continuous improvement of development workflows.

SOFTWARE ENGINEER

Infor | Aug 2025 – Aug 2026

- Contributed to the development, enhancement, and maintenance of enterprise mobile applications using native Android and hybrid technologies.
- Collaborated with cross-functional teams, including software engineers, QA, and product stakeholders, to deliver reliable and maintainable solutions.
- Participated in technical discussions, code reviews, and troubleshooting to improve application quality, performance, and stability.
- Applied software engineering principles, design patterns, and best practices to develop clean, scalable, and maintainable code.
- Gained exposure to AI-assisted software development using tools such as Kiro to support coding, problem-solving, and development workflows.
- Continuously strengthened technical expertise through hands-on development, collaboration, and learning new technologies.

SOFTWARE ENGINEER, ASSOCIATE

Infor | Aug 2022 – Aug 2025

- Contributed to the development and maintenance of native Android and hybrid mobile applications supporting enterprise business operations.

- Developed and enhanced native Android applications using Java and MVVM architecture, focusing on scalability, maintainability, and testability.
- Applied object-oriented programming (OOP) principles and design patterns to build clean, modular, and reusable code.
- Integrated RESTful APIs to enable reliable communication between mobile applications and backend services.
- Maintained and improved hybrid mobile applications using Ionic and Cordova, ensuring consistent functionality across native and hybrid platforms.
- Implemented MVC architecture to organize application components and improve code maintainability.
- Integrated SOAP-based web services to support enterprise system communication and data exchange.
- Collaborated with cross-functional teams, including backend developers, QA engineers, and product teams, to deliver features and resolve technical issues.
- Participated in code reviews, debugging, optimization, and refactoring to improve application performance, reliability, and overall code quality.

IT SPECIALIST INTERN
Miyens | Feb 2022 – May 2022
- Assisted in building and maintaining company web pages using WordPress.
- Designed basic UI/UX components to support internal initiatives.
- Provided IT support and assisted with system maintenance tasks.
- Gained foundational experience in professional collaboration and structured development processes.

PROJECTS

PUMP — Personal / Ongoing Project
Full-Stack Mobile & Backend System | Flutter, Java Spring Boot, MongoDB, PostgreSQL, Docker, Kubernetes
- Developing a fitness-focused social and coaching platform that connects fitness enthusiasts, clients, and coaches through community engagement, workout tracking, and personalized coaching.
- Designed a microservices architecture using Spring Boot, with dedicated services for authentication, social interactions, and coaching functionalities.
- Implemented RESTful APIs, JWT authentication, and database integrations using PostgreSQL and MongoDB.
- Containerized backend services using Docker and configured Kubernetes for service orchestration, scalability, and deployment management.
- Developing the mobile application using Flutter, Riverpod, and MVVM architecture, focusing on maintainability and user experience.

FORGE — Personal / Ongoing Project
AI-Assisted Software Engineering Toolkit | Python, AI Agents, Developer Tooling
- Developing an AI-assisted software engineering toolkit focused on improving development workflows through structured, context-aware AI interactions.
- Exploring AI agent orchestration to support codebase analysis, implementation planning, and development task execution.
- Designing modular workflows that integrate AI-assisted development with established software engineering practices.
- Applying structured documentation, task planning, and validation processes to improve consistency and maintainability.
- Exploring modern AI development tools and techniques while emphasizing developer oversight and continuous learning.

CERTIFICATIONS

- **CompTIA** - IT Fundamentals - 2018
- **Microsoft** - MTA Introduction to Programming Using Java - 2019
- **Amazon Web Services** - AWS Academy Graduate - 2022
- **OpenAI** - Agents and Workflow - 2026

SKILLS

Languages: Java, Python, Dart, JavaScript
Mobile & Frontend Development: Native Android (Java), Flutter, Ionic (Cordova), React.js
Backend & Architecture: Spring Boot, Microservices, RESTful APIs, Event-Driven Architecture, MVVM, MVC
Databases: PostgreSQL, MongoDB, SQLite (Room)
Messaging & Data Streaming: Apache Kafka, Confluent Cloud, Apache Flink
DevOps & Cloud: Docker, Kubernetes, GitHub Actions, CI/CD
Tools & Platforms: Git, GitLab, Maven, Postman, Jira, Firebase
AI & Developer Tools: AI-Assisted Development, AI Agents, Kiro, Codex
